SUMMARY

A proactive Computer Engineering major with keen interest in backend software development. Familiar with writing contributions to scalable infrastructures with Java (Spring Boot microservices). Highly adaptive with an interest in learning and converting the given requirements to clean code with proper direction, working in collaborative Agile teams, and participating in the software development life cycle from designing to testing.

EDUCATION

Bachelor of Science in Computer Engineering(Honours) **2022 - Present (Expected 2026)**
Faculty of Engineering | University of Jaffna

Central College Anuradhapura **2012 - 2021**

- GCE Advanced Level (Physical Stream)
  - Grade ABB with a Z score of 1.58
- GCE Ordinary Level
  - 9As with the subjects English Literature,Tamil and ICT

St. Joeseph's College Anuradhapura **2007 - 2012**

PROJECTS

- **Sazzler E-commerce Microservices Platform** **In Progress**
  - A scalable e-commerce system using **Java, Spring Boot, and Gradle,** following microservices architecture.
  - Implemented core services: Product, Order, and Auth with their **PostgreSQL** and **MongoDB** databases.
  - Secure authentication and authorization(Role Based Access Control) using **JWT**.
  - Used **Postman** for API documentation and API testing.
  - Built the **API Gateway** for routing, load balancing, and centralized security.
  - Utilized DTOs for clean data transfer and service decoupling.
  - Integrating **Kafka** for asynchronous messaging and **Prometheus** metrics (in progress).
  - Leveraging **Eureka** for **service discovery** and **Spring Cloud Gateway** for API management (in progress).
  - Containerization with **Docker** and cloud deployment on **AWS**.(in progress). Github Repository

- **Springboot Pilot Project** **Jun 2025 - Aug 2025**
  - Developed a secure **RESTful API** using **Java, Spring Boot,** and **Gradle**.
  - Implemented **JWT**-based authentication and role-based authorization.
  - Designed and tested endpoints for user registration, login, and protected resources.
  - Wrote comprehensive unit and integration tests with **JUnit** and **Mockito**.
  - Used **Postman** for API documentation and API testing.
  - Utilized **Liquibase** for automated database migrations and version control.
  - Applied best practices in exception handling and validation. Github Repository

- **Sortify AI** **Aug 2025 - Sep 2025**
  - An AI fullstack web app that sort and classify 12 classes of garbage images to their respective category with an accuracy of 92%. Built with **Fast-API, TensorFlow, React, HTML, CSS**
  - Built a backend using FastAPI to handle the frontend request and for the model inference
  - build a responsive frontend to upload the image and display the classification details.

  Github Repository

- **DeptWise** **Jan 2025 - May 2025**
  - A system to assist the day to day functions of the computer engineering department.(**NodeJs, React, Tailwind, CSS** and **MySQL**).Led the team as the Product Manager, by developing the lifecycle using the **Scrum framework**, leveraging **Jira** for backlog management, sprint planning.
  - Contributed as a developer by Designing and building the Contact Us page. Github Repository

- **TARS** **2025**
  - IOT solution with a mobile app for smart school bus transportation **(React Native)**

Github Repository

- **Emotion Recognition of Sinhala Language Texts in Social Media** **2025**
  - Final year research using latest methods of NLP(**RoBERTa based custom model**) to recognise Ekman's Basic Emotions. Improved the overall accuracy to 72%

Github Repository

- **Echobridge** **2024**
  - Feedback Management system to asses and process the student feedback
  - Developed the Frontend and Backend to submit and review lecturer and course feedbacks using **PHP, HTML and CSS**
  - Created the database schema and indexes using **MySQL**.

Github Repository

EXPERIENCE

- **Formula Student Racing - Team Yarl Racing**
  - **Financial Manager** **Jun 2024 - Present**
    - Sourced sponsorships and university funding to support the team, and oversaw all expenditures with care to maintain financial constraints on the project.
    - Controlled resource allocation: Assigned a small budget to competing, sub-teams of engineers (e.g. powertrain, aerodynamics) in a strategic move to maximize performance while meeting project milestones.
    - Performed detailed cost analysis on systems and parts to make sure the team was complying with the competition's strict regulations.
    - Collaborated closely with engineering leaders, overseas stakeholders to provide financial data and support that influenced major design decisions.
  - **Team leader (Low Voltage)** **Mar 2024 - Feb 2025**
    - Designed the BSPD (Brake System Plausibility Device)
    - Designed the low voltage electrical system architecture
    - Collaborated with other teams to create the overall electrical system.
- **Batch Representative** **Apr 2023 - Feb 2024**

SKILLS

- **Backend Frameworks**: Spring Boot, FastAPI
- **Frontend**: React, TailwindCSS
- **Databases**:PostgreSQL, MongoDB, MySQL, OracleDB, Firebase
- **Event Streaming and Distribution**: Kafka
- **Project Management:** Jira
- **Cloud & DevOps:** Docker, AWS, Git
- **Monitoring & Observability:** Prometheus, Grafana
- **ML / NLP:** Pandas, Numpy, PyTorch, TensorFlow**,** Transformers**,** Scikit-Learn
- **Programming Languages:** Java, Python, C++, MATLAB,JavaScript

ADDITIONAL INFORMATION

- **Languages:** English (Fluent), Sinhala(Native).
